

smart motion

The roller shutter drive

The roller shutter drive

All inclusive

12 V DC for vertical operating directions, including transformer, plug in – finished!

Simply start

Automatic setting of the end positions

Totally safe

Sensitive obstacle detection with fast-stop

Guaranteed flexibility

Manual operation in case of power failure

Time-saving assembly

Without any preparations regarding the cabinet

Image 1

Control options

Image 1

Operation by remote control

Frequency 868 MHz, either individual or synchronous operation of various drives

Image 2

Operation by LED sensor

Either embedded in the right or the left guiding profile, height position freely selectable

Image 3

Operation by light switch

The flush-mounted radio transmitter can be combined with all common light switch programmes.

Image 2

Image 3

The characteristics

The idea of smart motion

Electrical roller shutter drives absolutely easy:

- ✓ Complex wiring – does not exist!
- ✓ Inconvenient programming – no, thanks!
- ✓ Complete safety – of course!

Considering that, the roller shutter modules **smart case** and **dyna case** offer the perfect basis. With regards to grooved roller shutters the **smart motion compactt** module can also be connected easily.

The illumination

Ideal combination: the smart motion control has a 12 V DC output in order to switch optional light shelves.

smart case

- › the classic module with electrical drive
- › full range of measurements from 400 mm cabinet width onwards
- › LED sensor for front thickness guiding profiles
- › current output for the provided transformer

dyna case

- › for high or wide roller shutters
- › ceiling-high from 400 mm cabinet width onwards
- › LED sensor for front thickness guiding profiles
- › current output for the provided transformer

smart motion compactt

- › the drive module for grooved or surface-mounted guidings
- › suitable for horizontally operating roller shutters
- › remote control or operation by light switch
- › power supply through the side panel or to the rear

The roller shutters

Aluminium smart plus

- › Straight-lined and striking: extruded slats made of solid aluminium provide the basis for its concise design.
- › Classic and timeless: slat height 25 mm.
- › Absolutely silent: flexible plastic profiles interconnect the single slats free from backlash.
- › High-quality components: end caps made of low-friction polyamide ensure the comfortable operating features of the roller shutter.

Aluminium smart XXL

- › Light and solid: slats made of roll-formed aluminium.
- › Vibrant design: slat height 40 mm.
- › Absolutely robust: the strong interlinkage of the slats allow ceiling-high dimensions of widths up to 2400 mm.
- › A true all-rounder: various equipment options turn every roller shutter into your very personal smart XXL.

Plastic with decorative finish

KS 25 - series

- › Absolutely reliable: the robust interlinkage of the slats stands for longevity even under tough operating conditions.
- › ABS material: recyclable with maximum bending stiffness.
- › Maximum stability: bottom profiles made of real aluminium.
- › Classic and timeless: slat height 25 mm in three surface quality levels.

KS 25 F Slats wrapped with real aluminium

KS 25 Slats with hot stamping foil

KS 25 L Paintable slats

Plastic with decorative finish

KS 40 - series

- › Absolutely reliable: the robust interlinkage of the slats stands for longevity even under tough operating conditions.
- › ABS material: recyclable with maximum bending stiffness.
- › Maximum stability: bottom profiles made of real aluminium.
- › Timeless elegance: slat height 40 mm in two surface quality levels.

lucy

The interior illumination of cabinets

The option

The glass shelf lucy is the ideal supplement to the smart motion drive. Simply insert the connection cable into the 12 V output of the smart motion control – finished.

The result is a well-designed and practical interior illumination of cabinets which simply follows the roller

shutter activity. When opening the roller shutter, the light switches on automatically. When the roller shutter is closed, it goes out. And all without additional sensor or complex wiring.

You can find further information on the glass shelf in our current lucy brochure.

KNOKE Beschlagtechnik: Two decades of innovation “made in Germany”

Quality, customer service and confident cooperation have been on top of the scale of values since the foundation of the company in the year 1993. By means of these principles KNOKE Beschlagtechnik has not only turned into an established service provider for the local furniture industry but has taken a significant step forward by opening up a number of international markets.

Our competence within the treatment of aluminium profiles and glass elements as well as our expertise in the range of assembly technology make us a leading partner for the development of customised solutions worldwide. The successful placement of own products in international markets reinforces our position as a specialised initiator within our branch.

Today more than 20 highly committed employees design and produce roller shutters, furniture fittings and a great deal of pleasure for our customers in over 30 countries.
